

Acesonic 6000 / 6000 PRO

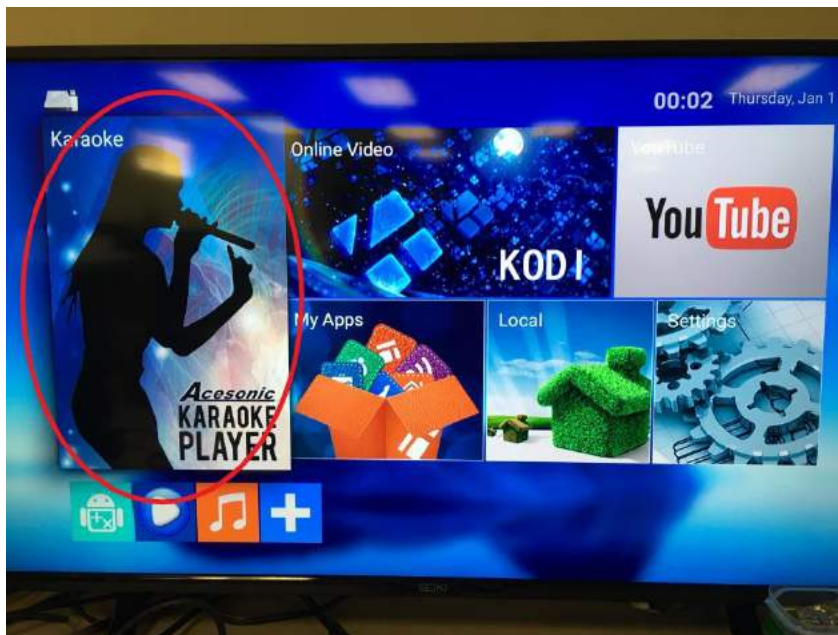

Update Karaoke application (APK)

NOTE: The example is for APK update for KOD-6000-PRO, the update procedure for KOD6000 Touchscreen is very similar. Please use this instruction as a reference.

Standard Update Procedure: For complete update, user need to update firmware to newest version first, then install the APK.

Install Firmware → install APK

Step 1: Check your karaoke apk version

*On the main menu, enter “karaoke player”.
Inside “karaoke player”, click “settings”.*

Apk version will be displayed on top right. (ver. 20180207 shown)

Please verify your APK version before installing

Please visit www.acesonic.com for latest updates

Install the latest APK :

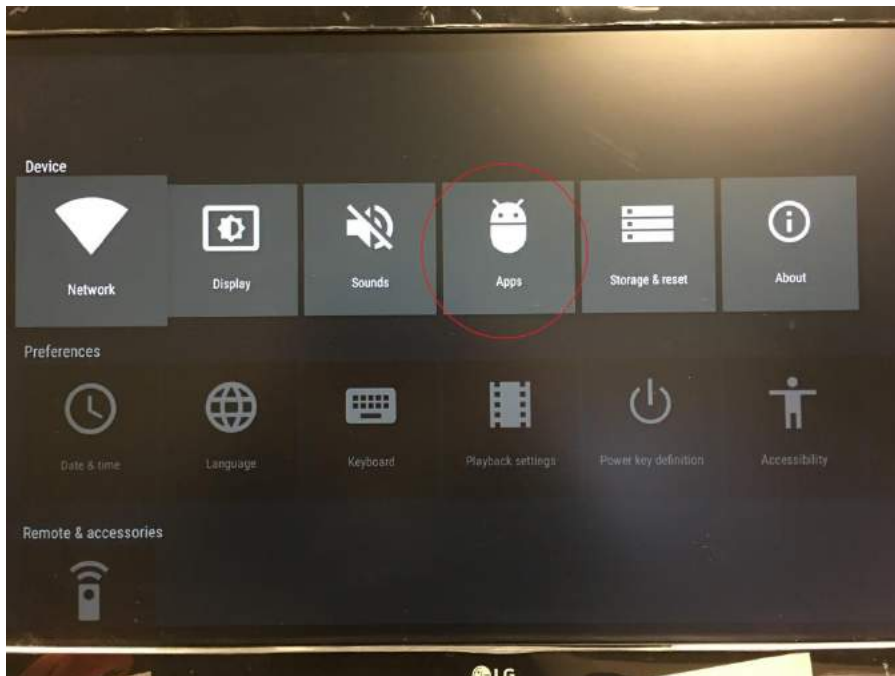

Please download the latest APK from acesonic.com and save the APK into USB flash drive.

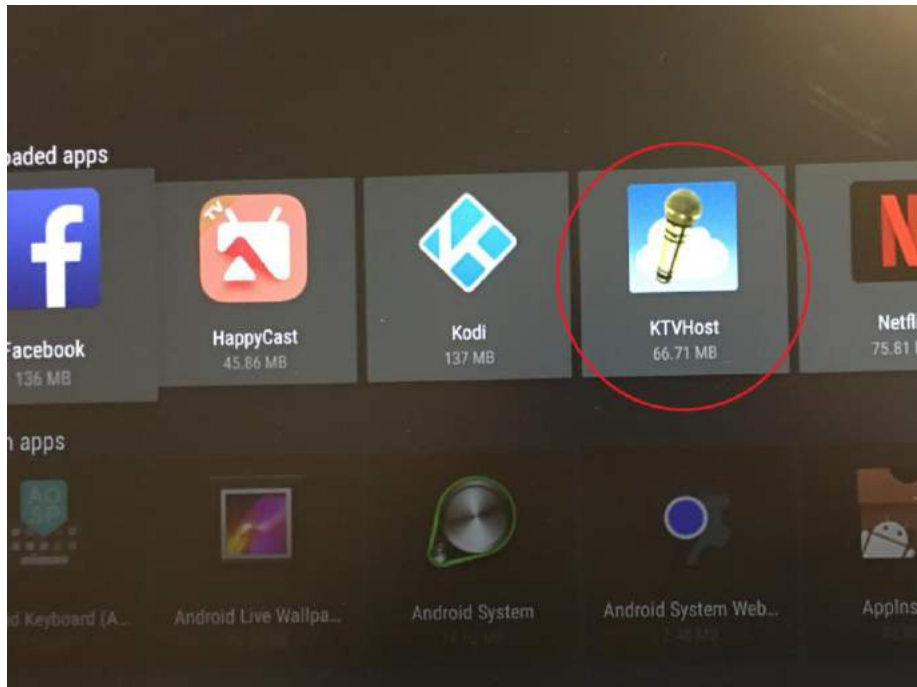

Step 2: uninstall old APK and install new APK

Select “settings” in the main menu

In the “settings”, select “app”,
Inside “app”, choose the “KTV host” icon.

Inside the “KTVHost” app, choose uninstall

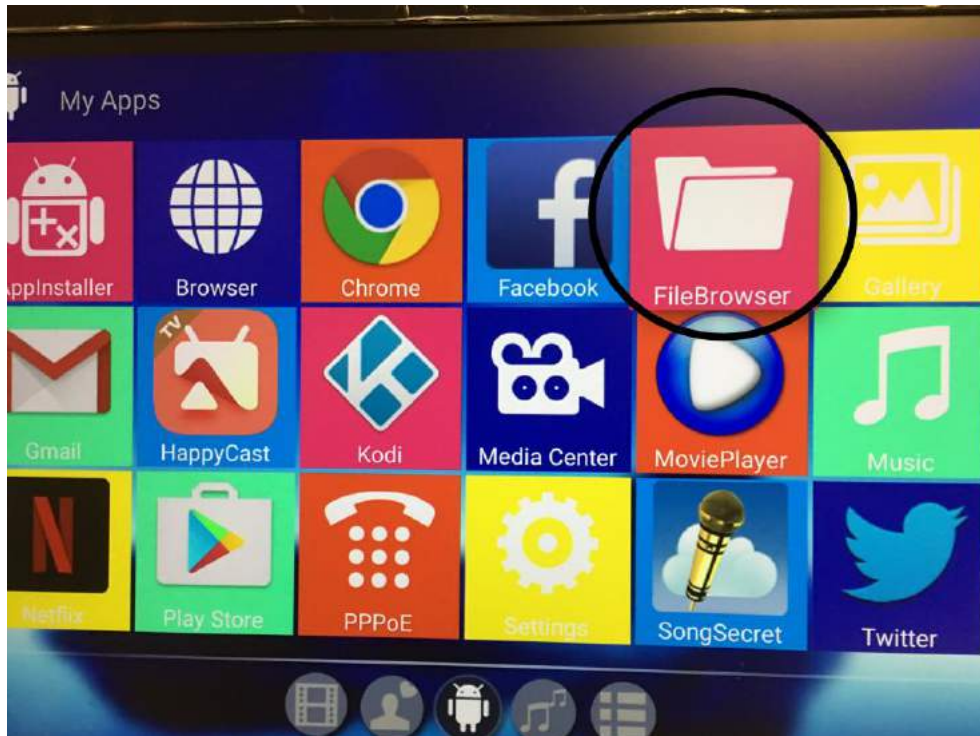

After the App was uninstalled, return to the main menu and choose “my apps”

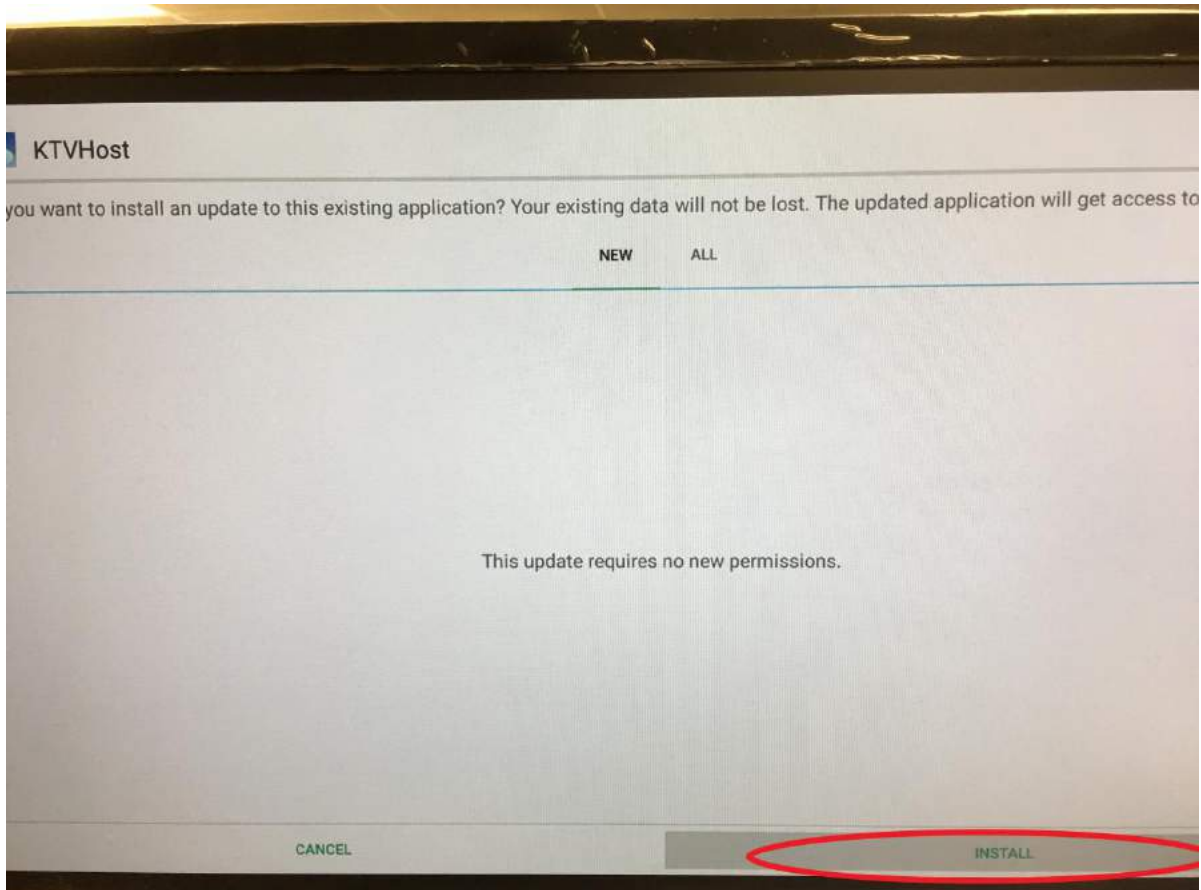

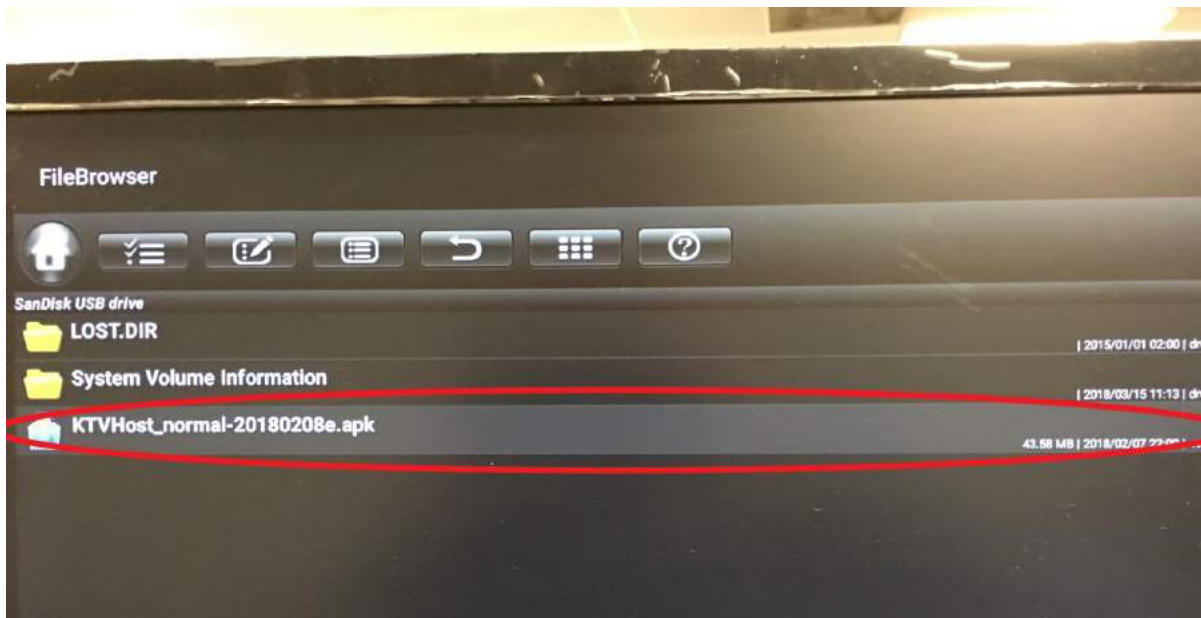

Insert the USB into the front panel (or you can plug insert it into the back)

Inside “my apps”, choose “fileBrowser”

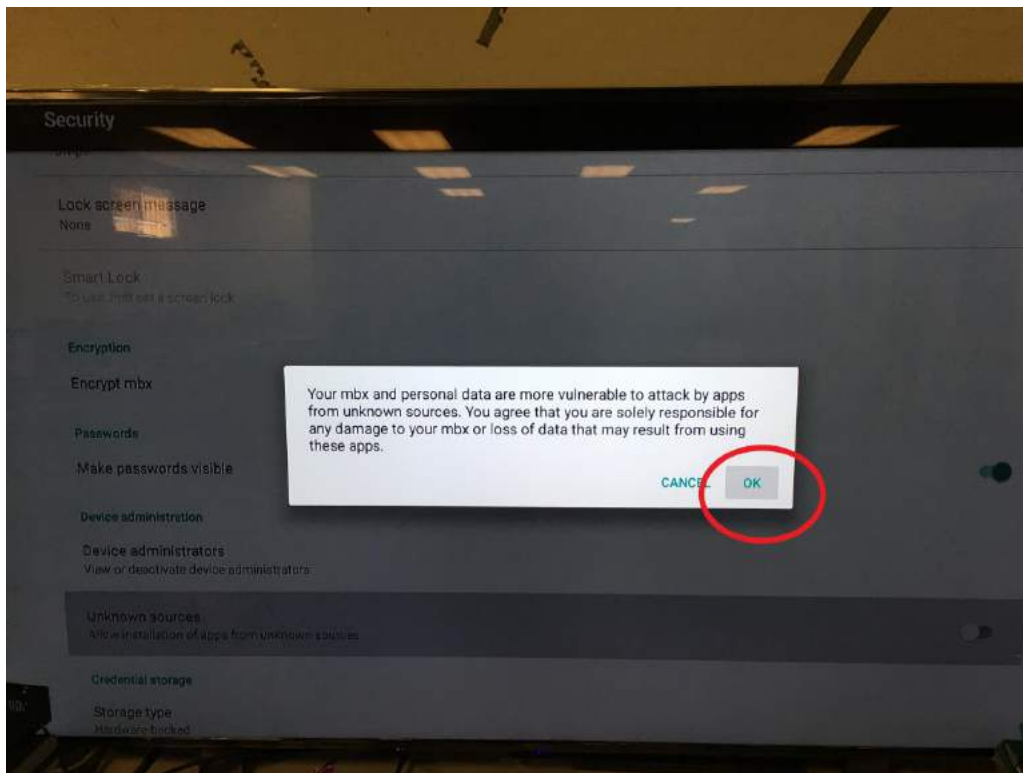

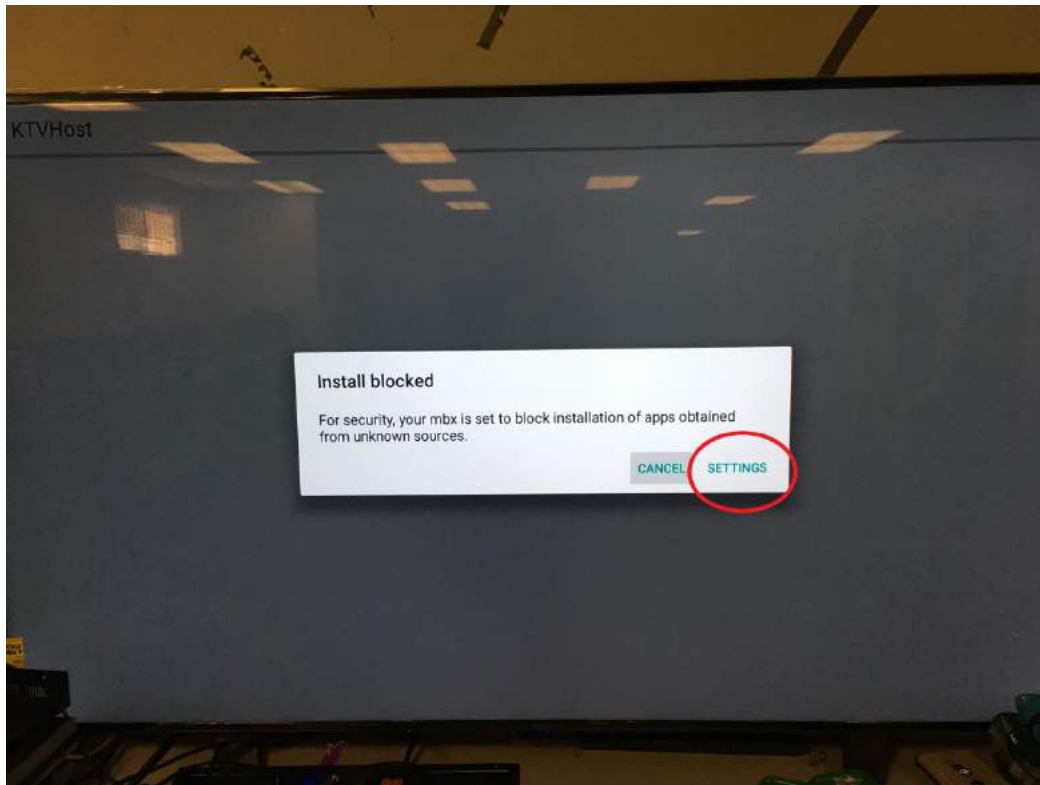

Select the usb flash drive that was inserted

Please note:

It depends on your firmware and Apk version, on some KOD 6000, it might show a message- "For security, your mbx is set to block installation of apps obtained from unknown sources". Please click "settings" when the message is shown, it will lead you into the security menu, uncheck the "unknown sources", then "warning" message will display- " your mbx and personal data are more vulnerable to attack by apps from unknown sources. You agree that you are solely responsible for any damage to your mbx or loss of data that may result from using these apps", please click OK.

Click the “apk” , then click install at the bottom of the screen

After installation, Please check your apk version (shown at step:1)
